

BERMS

Portable Berms were designed to fulfill the need for a compact, highly portable, rugged Secondary Containment which could be stowed behind the seat of a pickup or in the cab of most machines. The Portable Berm was designed to be deployed in seconds and withstand the effects of a wide range of climate conditions from arctic cold to desert heat. Portable Berms will stand-up to hot automotive fluids including oil, brake fluid, diesel, gasoline, coolants and acids.

When the Portable Berm is deployed it can be used immediately. It can also be pre-fitted with a disposable absorbant pad for easy clean-up. When the pad becomes contaminated, lift the retaining screen, remove the pad and place in a container for proper disposal at a later time. The Berm is then wiped dry, refolded, belted and stowed for re-use.

Portable Berms are made with a polymer material enhanced with a special coating compound that is good to a negative 65 degrees and up to 130 degrees.

Standard size Berms:

Item no.	Format	Units / Case
BERM-226	Berm	2' x 2' x 6"
BERM-336	Berm	3' x 3' x 6"
BERM-446	Berm	4' x 4' x 6"
BERM-556	Berm	5' x 5' x 6"

(The wall height of 6" is standard but has been made to as little as a 1" depth.)
